

Shopping Cart Project by using **HTML/CSS/Javascript/ES6**

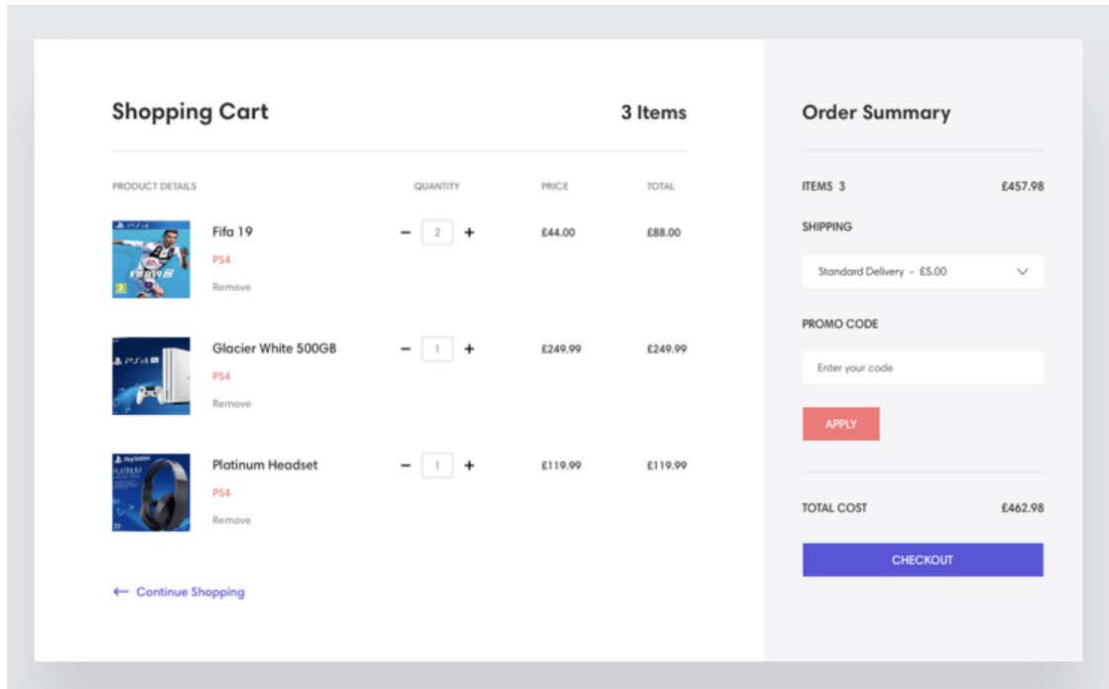

1. Create Shopping Cart Application by using HTML/CSS/Javascript/ES6
Note: Use plain CSS for styling, third party CSS framework is not allowed
2. User Login functionality is required, below is the design:

Login page functionalities:

- Create a dummy username and password to login
- Forgot password & Signup functionality is not required, only create UI
- After successful login user should land to Shopping cart page

3. Create a below mentioned shopping cart page, maintain the same UI and color scheme

Shopping Cart page functionalities:

- Write all the shopping cart functionalities by using plain Javascript / ES6
- Fetch the shopping cart products from attached products.json file
- Display total number of items in the cart
- Quantity Increment & Decrement functionality is required
- On right side display the order summary
- Shipping charge is fixed amount
- Use this promo code FIRST10 to reduce 10% in the total amount
- After clicking on Checkout button, you should display all the products with total price

Note: To create this application use only HTML/CSS/JAVASCRIPT/ES6, don't use any third party framework or library.
